**ANNOTATION.** In this article, higher education is the main support and foundation of society. In addition, extensive foreign experience in improving the education system and quality has been studied. As a result of these analyses, proposals and recommendations for improving the education system of the Republic of Uzbekistan were developed.

**Key words:** Higher education, education, education, pedagogue, youth, reforms, financial independence, quality of education.

Higher education serves as a basis for development covering all spheres of society's life. As a result of human activity, it serves renewal and social development in society. The term "superior" can be derived from the French "enseignement superieur" - "higher" or "higher" concept. In this way, we would not be mistaken if we say that it was applied to people who received knowledge in a prestigious place. That is, "higher

education" began to be used to refer to a lot of science, knowledge and a qualified specialist in a certain direction. As a result of further development, the emergence of the new multiplicity of large-scale universities, institutes, and similar institutions has led to the increase in the number of highly educated inconlaps.

Higher education, in turn, is based on secondary education and is a specialized field that provides educational activities. We can also say that it is a specialization aimed at learning to higher levels of difficulty. A higher education institution includes what is usually understood as academic education, but it also includes vocational education. That is, it covers ISCED level 5 (short-term higher education), level 6 (bachelor's degree or equivalent), level 7 (master's degree or) its equivalent, and level 8 (doctorate or its equivalent). The content of higher education programs is more complex and deeper than the lower ISCED levels.

Милоддан аввалги V-III асрларда ёшлар таълимига катта эътибор берган Қадимги Юнонистонда юқори даражадаги таълим таъминланган. Милоддан аввалги IV-III асрларда таълимнинг энг юқори даражасини таъкидлайдиган мафкурачилардан бири Афлотун (Платон) эди.

In the new era, science and education were freed from the strict cholactism in "Opta acplap, that is, in XIV-XVI acplap". Cholactic school English philosopher F. It was later criticized by Bacon. The humanist writers and teachers of that time - V. Da. Feltpe, E. Pottepdamckiy, L. Vivec, F. Pable, M. Montan protested the monopolization of the educational field by the Catholic Church.

The process of imparting education, the formation of qualifications and skills, is the main means of preparing a person for life and work. In the process of education, information is obtained and education is carried out. Education means teaching in a narrow sense. But it also means the process of providing information not only in different types of educational institutions, but also in the family and other areas. "It is clear to all of us that the cornerstone of development and the force that makes the country powerful and

the nation great is science, education and upbringing. Our tomorrow, the bright future of our country, is closely related, first of all, to the education system and the education we provide to our children" - Shavkat Mirziyoyev. Education is the mirror of every nation. A person always seeks knowledge throughout his life. During the acquisition of knowledge, he faces various obstacles and difficulties.

But in our modernized way of life, all the conditions for learning are present. In the past, there were not as many opportunities in the field of education as there are today, but our ancestors managed to get an education. Abu Nasr Farabi<sup>1</sup> - a number of scientific achievements of the Middle Ages, the development of progressive scientific-philosophical thinking in the countries of the Near and Middle East in general are connected with his name. According to some sources, he knew more than 70 languages. This is a great result for that time. "Education does not change the world, but you change the people who want to change the world," said Paulo Freire. Without education, there is no future, the hope of a better, sustainable, supportive and just world for all depends on the knowledge they receive. The children of today will be the leaders of tomorrow and there is no better way to make up for the mistakes than to learn from them. Education and upbringing should be harmonious. A thousand years ago, the great thinker Mahmud Kashgari touched on the issues of education and morality in his work "Devonu Lughatit Turk" and said, "Time has completely waned. Knowledge, wisdom, purity decreased. "There is an increase in the number of bad people, and the number of virtuous people is disappearing," he wrote. Such views of sages who lived in different eras can be observed in the history of many peoples of the world. However, according to the development of time and society, new problems have arisen in the issue of youth education, and the tasks before educators and teachers have increased. People are not divided into good or bad as a whole. If it were so, the issue of education would be easily solved. The struggle of good qualities and bad habits, different ideas to occupy the heart and mind of a person shows how complicated the issue of education is. Although the word "education" has many meanings, if we proceed from national traditions, its "moral" quality first comes to mind.

That's why our forefathers prioritized child morals over other types of education. Fitrat adds education to education and calls it "mental education". Also, paying serious attention to bringing a child to a healthy adulthood, i.e., "physical education", summarizing these three types of education, he simply expresses "personal socialization" in modern language: "...children's education means raising a child physically, intellectually and morally. That is, to send them to the desert of effort and struggle, that is, to the field of life and death, armed with a strong body, a healthy mind and good morals. At this point, it is appropriate to dwell on the dictionary meaning of the words "education" and "education".

In general, the essence of higher education requires the following:

- evaluation of higher and general education goals in determining the internal threats to the youth's spirituality and the measures to combat them;
- to increase education, concepts and ideas in the education of the next generation.

In this regard, as the First President of the Republic of Uzbekistan I.A. Karimov noted: "Social development, first of all, the issues of strengthening the material and technical base of education and health care and equipping them, without a doubt, will be in the center of our attention this year." In the conditions of globalization, the education sector has become a factor of improving the country's mental capacity and intellectual thinking, as a result of the accumulation of intellectual capital. After all, philosophical education plays an important role in raising the incon factor to a higher level. In the framework of the modern economy, the development of a broad world-view, with a sense of involvement in the life of the society, is becoming the demand of today.

Without the establishment of an educational system that represents the future, and without a competitive educational system that can compete with the world community, Uzbekistan will not be able to have its proper place in the world. Kadplap demanded that the national policy of development should be "fully developed, taking into account the socio-economic conditions of the labor force, and its precise preparation".

Innovative educational services in the Uzbek economy meet the demand for educational services in the region.

In conclusion, reforming the education system and evaluating its importance as a necessary phenomenon in any context required a lot of reforms, especially as measured by the implementation of innovations. Therefore, increasing the effectiveness of the educational system, equipping pedagogues with modern knowledge and practical skills and qualifications, learning foreign advanced practices and applying them to educational practice is the most important task of today. Bringing innovation to modern education, the application of advanced educational technology is aimed at solving the problem in this direction.
